

INDIANA UNIVERSITY

DEPARTMENT OF MEDICAL AND MOLECULAR GENETICS
School of Medicine

Faculty Mentor Agreement for Medical and Molecular Genetics (MMGE) Ph.D. Students

Graduate Student:

Faculty mentor:

This is to confirm that the above named faculty member is offering to accept the above named student into their laboratory. By accepting this student, the faculty member agrees to support the student throughout their Ph.D. training. Specifically, the faculty member will cover the cost of stipend, tuition, mandatory fees, and health insurance premiums as long as the student remains in good standing (as determined by the student's committee). However, the mentor must consult with the program director and/or Chair of MMGE about significant changes in supporting the student before taking any action.

If the faculty member has a decrease in funding, the faculty member's primary department will continue to provide support for the student until the degree is conferred.

If the graduate student is supported on the faculty member's grant, all indirect costs associated with the student will go back to the faculty member's department.

Medical Genetics will work with the faculty member by providing data, letters of support, and other assistance in training grant applications that support the student.

If the faculty member leaves the institution, Medical Genetics will assume responsibility for the student. Again, the mentor should consult with the program director or Chair of MMGE about significant changes affecting the student's support.
